

Hand & Power Tool Safety Policy

BENEFIT

You need to carefully vet the safety features of power and hand tools and select the ones you deem safe for use in your workplace. But tool selection is just the beginning of the story. Workers must also be trained and instructed how to properly operate, inspect and maintain each tool they use.

HOW TO USE THIS TOOL

This is a policy that sets out general safety rules for operation of hand and power tools. You will also need specific rules and procedures for particular kinds of tools based on the type of equipment involved, manufacturer's instructions and the operations for which the tool is required.
