The OHS Risks You Shouldn’t Carry Into 2027 – November 18th, 2026

Date: November 18, 2026

Time: 09:00 AM – 10:00 PM (PT)

Speakers: Rick Tobin

About This Webinar

Some OHS risks don’t disappear at year-end. They roll forward. The same open corrective actions. The same inspection findings. The same high-risk tasks with weak verification. The same training gaps. The same supervisor inconsistencies. The same seasonal hazards that show up every winter. If they aren’t addressed before the next planning cycle, they become the starting point for next year’s exposure.

November is a critical month because operations often become more pressured, not less. Deadlines tighten. Shutdown work begins. Fatigue increases. Weather changes conditions. Supervisors may be focused on production, staffing, and year-end priorities. That’s when unresolved OHS issues can become harder to control.

This OHS Insider webinar will help safety professionals build a practical year-end risk review. We’ll look at how to

identify repeat issues, assess open corrective actions, review incident and near-miss patterns, check training and competency gaps, evaluate supervisor follow-up, and translate those findings into a focused 2027 OHS risk forecast. The goal is to help employers stop carrying preventable problems into another year.
